

# 'Recording Secrets For The Small Studio'

## Stereo Miking Protractor

The diagram below is a 180° protractor for setting up the mutual angle of a crossed mic pair: the solid lines show 10° increments; the dotted lines 5° increments. Also marked are suggested ranges of mutual angles for XY stereo pairs according to the mic polar patterns used -- for detailed discussion and guidance about using those figures, see Chapter 8 of 'Recording Secrets For The Small Studio'.
